ABSTRACT

This report on the financial circumstances of Aid to Families with Dependent Children (AFDC) recipients in May, 1975, is Part III of a three-part broad study of recipient characteristics. Part I provides demographic and program statistics, and Part II provides data on child support enforcement. The data were derived from a sample survey which included all states and jurisdictions except Guam. The minimum sample required from each state was one-half of one percent, but states were given the option to submit larger samples computed by specified formulas. Twenty-nine states provided samples large enough for reliable state data to be included in the tabulations. Data are also shown for all 10 Health, Education and Welfare (HEW) regions. Sample data are inflated to represent all families receiving money payments during the study month. Therefore, the data are subject to sampling variability and, as in all surveys, the figures are subject to errors of response. A brief overview of the financial circumstances of AFDC families in 1975 prefaces the 26 tables included in the report. Appendices provide a glossary of selected terms and a discussion of sample design and of data accuracy. (Author/RH)

HEW Pub. No. (SSA) 78-11777

NOTICE

Under a recent reorganization within the Department of Health, Education, and Welfare, the program of aid to families with dependent children became a part of the Social Security Administration.

FOREWORD

This report on the financial circumstances of AFDC families in May 1975 is Part 3 of a broad study of recipient characteristics. Part 1 provided demographic and program statistics and Part 2 provided data on child support enforcement. A subsequent report will offer data on services received.

The study was made by the National Center for Social Statistics of the Social and Rehabilitation Service before the reorganization of HEW announced in March 1977. The study was directed by Howard Oberheu of the Family Assistance Studies Staff. The sample was designed by William Hickey and Stanley Nachimson, mathematical statisticians, presently of the Office of Human Development Services and the Health Care Financing Administration, respectively.

The data were derived from a sample survey which included all States and jurisdictions except Guam. The minimum sample required from each State was one-half of 1 percent, but States were given the option of submitting larger samples computed by specified formulas. Twenty-nine States provided samples large enough for reliable State data to be shown in the tabulations. Data are also shown for all 10 HEW regions. Sample data are inflated to represent all families receiving money payments during the study month. Therefore, the data are subject to sampling variability and, as in all surveys, the figures are subject to errors of response.

The Office of Research and Statistics gratefully acknowledges the cooperation of State and local welfare agency personnel. State welfare agencies were responsible for completion of sample surveys for the study month. Information was obtained from case records supplemented by the personal knowledge of welfare agency workers.

B.	Sample design and accuracy of data	45

FINANCIAL CIRCUMSTANCES OF AFDC FAMILIES IN 1975

This summary of some of the major findings about the financial circumstances of AFDC families refers only to the national caseload. There is considerable variation among States in amounts of individual financial items.

When a family applies for AFDC, the public welfare agency considers the income and resources of the children, parents or relatives, and of other persons living in the same home requesting and receiving assistance. All types of income must be considered if it is available for current use on a regular basis. At the time of the study, child support payments that were actually made were usually considered as income. Each State specifies the amounts and types of personal and real property, including liquid assets, that may be reserved for current and future needs of the family. All States permit retention of real property used as a home, although some limit its value.

To determine the AFDC payment, the public welfare agency prepares a budget for the family. The major elements of the budget are (a) the need requirements established by the State, (b) nonassistance income, (c) nonassistance income disregards, and (d) the AFDC payment. The net nonassistance income (after income disregards) is subtracted from the requirements to determine the amount of the AFDC payment.

BUDGET SUMMARY (Tables 1-5)

Most of the 3.4 million families who received AFDC in May 1975 had little or no other income. Assistance payments totaled $743 million; nonassistance income was $210 million. Over one-half of the nonassistance income was not counted when determining the AFDC payment; $111 million was disregarded. On the average, AFDC families received $217 in benefits and had $61 in other income. Although the amount of income was about the same for families in metropolitan as in nonmetropolitan areas, the former's AFDC payment was considerably higher, $233 versus $158.

STANDARD OF NEED (Tables 6-8)

Each State is required to establish a standard in dollar terms to measure need. Some States budget only a single amount for all items, while other States budget separate amounts for such items as housing. Besides housing, the basic standard generally covers food, clothing, necessities, and utilities and varies by size and composition of family.

In May 1975, 6 in 10 families had only one or two children, and most had only one adult. The average number of children per family was 2.4. Proportions with adult recipients were: none, 12 percent; one, 81 percent; two, 7 percent. For a family of one adult and two children, requirements averaged $282.

TABLE A.--Average monthly standard of need, by number of adult recipients and number of child recipients

Child recipients	Adult recipients		
	None	One	Two
One	149.38	219.31	258.52
Two	167.26	282.15	335.87
Three	229.71	318.58	345.34
Four	273.76	368.83	426.21
Five	316.76	395.49	436.96
Six	353.37	441.05	457.74
Seven or more	478.57	513.79	481.95

NONASSISTANCE INCOME (Tables 9-11)

Before the amount of the AFDC payment is determined, all nonassistance income of the family is taken into consideration. Only 3 in 10 families had nonassistance income. The average was $212. Earnings were the major source of family income; 15 percent averaged just over $300. The two other major sources of nonassistance income were child support and social security benefits.

TABLE B.--Percentage of families with each type of nonassistance income and average amount for families with each type

Type of nonassistance income	Percent	Average amount
Total, one or more source.....	28.9	$212.02
Earnings of one or more persons.....	14.6	301.32
Mother.....	13.7	304.00
Father.....	.7	268.95
Children age 14 and over.....	.1	161.39
Other adults.....	.1	138.05
Public service employment (WIN) earnings.....	.1	140.07
OASDI and railroad retirement benefits.....	4.0	129.15
Veterans' benefits.....	.7	98.16
Other pensions or benefits.....	.5	138.00
Unemployment compensation.....	1.1	182.88
Workmen's compensation.....	.1	204.35
Court-ordered child support.....	4.3	93.52
Parent's agreement for child support	3.3	72.88
Contributions from stepparent in home.....	.5	73.70
Contributions from other persons in home.....	.8	63.80
Other cash income.....	1.1	61.54
Other in-kind income.....	1.5	34.34

DISREGARDED INCOME (Tables 12-14)

Some or all of a family's nonassistance income may be disregarded in determing an AFDC payment. Disregards are both mandatory and optional. For example, work expenses (amount determined by State) and the first $30 plus one-third of the remainder of gross earned income must be disregarded; up to $5 per month of any income of recipients or that which is set aside for future identifiable needs of dependent children may be disregarded. Over one-half of the families with nonassistance income had some of it disregarded for AFDC budget purposes; the average amount disregarded was $200 per family. The major types of income disregards were those required in connection with earned income.

TABLE C.--Percentage of families with nonassistance income by type of disregard and average amount for families with each type

Type of disregard	Percent	Average amount
Total	57.1	$197.19
$5 or less per person	7.7	8.30
First $30 + 1/3 of remaining earned income	48.8	121.25
Allowed employment expenses	45.2	103.11
Differentiated:		
Child care	13.7	80.19
Other	34.4	76.76
Undifferentiated	9.7	94.71
For support of dependents outside assistance group	.7	107.87
Additional disregarded income	7.2	76.81

ASSISTANCE INCOME (Tables 15-21)

The amount of the AFDC payment usually depends upon family size and the State standard of need, and available income. The average AFDC payment for a family of one adult and two children was $210.

TABLE D.--Average AFDC payment, by number of adult recipients and number of child recipients

Child recipients	Adult recipients		
	None	One	Two
One	106.24	171.76	217.09
Two	130.59	210.31	283.86
Three	169.68	250.00	276.56
Four	210.65	285.26	311.59
Five	239.57	314.84	325.57
Six	273.44	346.12	284.54
Seven or more	381.90	381.43	341.76

A very small proportion of families received general assistance or emergency assistance in addition to AFDC. When the AFDC grant and net nonassistance are added together, the average amount for a family of one adult and two children increased to $239.

TABLE E.--Average monthly amount of total income applied in assistance budget, by number of adult recipients and number of child recipients 1/

Child recipients	Adult recipients		
	None	One	Two
One	113.28	192.01	242.93
Two	145.62	239.09	315.10
Three	186.81	285.51	316.18
Four	236.10	326.75	361.01
Five	277.13	357.68	401.19
Six	299.88	388.50	383.87
Seven or more	426.22	432.35	419.85

1/ Includes net nonassistance income and assistance income.

PARTICIPATION IN FOOD DISTRIBUTION PROGRAMS (Tables 24-26)

Households in which all members receive federally aided public assistance or general assistance are eligible for the U.S. Department of Agriculture's food stamp and donated food programs without further regard to the income and resources of the household members. The eligibility of all other households is subject to maximum allowable income standards. Three in four AFDC families participated in the food stamp program, fully implemented at the time of the study. Available primarily on Indian reservations, few families participated in the donated food plan.

The amount of the monthly coupon allotment is determined by household size; the amount of the monthly purchase requirement by household income. The bonus value of food stamps is the difference between the allotment and the purchase requirement and constitutes an additional source of household income. This bonus value, however, cannot be taken into account in determining the amount of the AFDC payment. The average monthly bonus value for food stamp households was $100.

1 DOES NOT INCLUDE FAMILIES WHERE AN AMOUNT IS UNKNOWN

APPENDIX A--GLOSSARY OF SELECTED TERMS

OASDI. Federal old-age, survivors, and disability insurance benefits, popularly known as social security.

WIN. Work Incentive Program for AFDC recipients, which is administered jointly by the Department of Health, Education, and Welfare and the Department of Labor. As a condition of eligibility for AFDC, every individual must register for WIN unless the person is exempt under specified conditions. Exempt persons may volunteer for WIN registration.

Aid to families with dependent children (AFDC). As used in this report, AFDC means money payments with respect to a dependent child or children and includes money payments to meet the needs of the parent(s) or needy relative with whom the child is living and the needs of any other individual living in the same home who is considered essential to the well-being of the child if the resources and the needs of such individual are taken into account in determining the amount of the money payment.

Dependent child. For AFDC, this term means a needy child who has been deprived of parental support or care by reason of the death, continued absence from the home, or physical, or mental incapacity of a parent, or, at the option of the States, who is deprived of such support or care because the father is unemployed as defined in Federal regulations. The needy child must be living with his father, mother, grandfather, grandmother, brother, sister, stepfather, stepmother, stepbrother, stepsister, uncle, aunt, first cousin, nephew, or niece (including such relatives of the half-blood; preceding generations as denoted by prefixes of grand, great, or great-great; and persons who have legally adopted the child or his parents) in a place of residence maintained by one or more of such relatives as his or their own home. The child must be under age 18; or, at the option of the States 18 years of age but under 21 and a student regularly attending a school, college, university, or a course of vocational or technical training designed to fit the child for gainful employment.

Child recipient. Each dependent child who meets the above criteria is a child recipient. In some States this term includes the unborn child when pregnancy has been medically determined.

Adult recipient. An adult recipient is a needy relative with whom a dependent child is living and whose needs are taken into account in determining the amount of the AFDC money payment. If the parent of at least one of the children is incapacitated, or the father of one of the children is unemployed, the spouse of such parent may also be an adult recipient if the State so elects.

AFDC assistance group. The AFDC assistance group consists of the dependent children (child recipients) as defined above, the adult recipients as defined above, and any other individual living in the same home who is considered essential to the well-being of the child and whose resources and needs are taken into account in determining the amount of the AFDC money payment.

AFDC family. As used in this report, the AFDC family is synonymous with the AFDC assistance group. Other persons related to members of the assistance group may live in the same household. Thus, the AFDC family will sometimes differ from the "family"as it is usually defined. The most commonly used definition of a family is that of the U.S. Bureau of the Census: two or more persons related by blood, marriage, or adoption who reside together.

SMSA. 2/ Except in New England, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, SMSA's consist of towns and cities, rather than counties.

Central cities. 2/ The population inside SMSA's is further classified as "inside central cities" and "outside central cities." With a few exceptions, central cities are determined according to the following criteria:

1. The largest city in an SMSA is always a central city.

2. One or two additional cities may be secondary central cities on the basis and in the order of the following criteria:

   a. The additional city or cities have at least 50,000 inhabitants.

   b. The additional city or cities have a population of one-third or more of that of the largest city and a minimum population of 25,000.

2/ As defined by the Statistical Policy Division, Office of Management and Budget, Executive Office of the President.

APPENDIX B--SAMPLE DESIGN AND ACCURACY OF DATA

DESIGN CONSIDERATIONS

The sample for the 1975 AFDC Study was designed to be representative of the May 1975 caseload. In addition, the sample was stratified to allow for a longitudinal analysis of the AFDC caseload and to check the accuracy of reporting. For the longitudinal strata, the sample included cases that were used in the 1973 AFDC Study sample that also received AFDC in May 1975. For the accuracy check, the sample included cases from the May 1975 AFDC quality control sample. Additional cases were used for the 1975 AFDC Study that were neither in the 1973 sample nor the quality control sample.

To obtain the longitudinal strata sample, an attempt was made to equalize a State's 1973 and 1975 sampling rate. If the 1973 sampling rate was higher than the 1975 rate, the 1973 cases were subsampled down to the 1975 rate. If the 1973 sampling rate was lower, the 1973 cases were supplemented by cases drawn in 1975 which received a payment in 1973. Different weights for each stratum were assigned to compensate for differences in the sampling rates.

The first step in the weighting process was to estimate the stratum population in each State. The proportion of cases in each stratum was estimated by the sample proportion of cases drawn entirely from the 1975 caseload that were in each stratum. The total AFDC universe was then multiplied by these proportions, resulting in an estimate of population totals in each stratum. Stratum weights were then calculated by dividing the population estimates in a stratum by the number of sample cases in a stratum.

STATE SAMPLE SIZES

States had the option of using either a minimum sample size (1.3% of the AFDC caseload in Region VIII; 1% in Region X; .6% in Region VII; and .5% elsewhere) or an increased sample size sufficiently large to estimate a characteristic occurring at the one-half of one percent level in the State AFDC population with a standard error of 0.25 percent. The sample size was calculated using the formula:

$$\text{sample size} = N/(1 + (.00116879 \times N)),$$ where N is the caseload size.

SAMPLING VARIABILITY

The figures in the attached tables are based on a sample of AFDC families and are, therefore, subject to sampling variability. They may differ from the results that would have been obtained by a complete census. However, because the research design involved a known probability of selection for a given family, the sampling variability can be estimated. The following tables indicate the estimated sampling variability (or standard error) of various percentages and absolute numbers contained in the tables in this release.

About 2 out of 3 of all possible probability samples selected, with the same specifications, will yield estimates within one standard error of the figures that would have been obtained in a complete count of AFDC families. About 95 percent of all such probability samples will give estimates within 2 standard errors, and about 99 percent of all possible probability samples will give estimates within 2.5 standard errors of the "true" figure.

TABLE A-2.--Approximate standard error of estimated percentage of AFDC families for the U.S. 1/

Estimated percentage	Standard error	Estimated percentage	Standard error	Estimated percentage	Standard error
1.....	0.08	18.....	0.29	35.....	0.36
2.....	.11	19.....	.30	36.....	.36

17.....	.29	34.....	.36		

1/ For percentages (p) greater than 50, the standard error is equal to the standard error of 100-p.

APPROXIMATE STANDARD ERROR FOR POPULATIONS OTHER THAN U.S. TOTAL FAMILIES

The approximate standard error for recipient children is the same as for U.S. total families. For any State and regional population, multiply the approximate standard error for the U.S. population by the factor for the State or region as shown in the following table:

TABLE A-3.--State and Region Factor

Area	Factor
State	5.0
Region I	4.0
Region II	2.5
Region III	3.0
Region IV	2.6
Region V	2.2
Region VI	3.6
Region VII	4.2
Region VIII	4.2
Region IX	2.7
Region X	4.2

For example, an estimate of 25% for families has a standard error of .33%. For Region I recipient children, an estimate of 25% has an approximate standard error of 1.3% (.33 x 4), from tables A-2 and A-3.

APPROXIMATE STANDARD ERROR FOR SUBUNIVERSE CHARACTERISTICS

Several tables concern subuniverse tabulations of portions of the total universe (e.g., families with nonassistance income is a subuniverse of all families). To obtain the approximate standard error of subuniverse percentage values, multiply the subuniverse percentage value of the universe by the subuniverse characteristic percentage value. Then use the tables to determine the standard error of the product, treating the product as a percentage value of a universe characteristic. Using the total monthly amount for families with disregarded nonassistance income in California as an example, 45.3 percent of the total monthly amount was allowed employment expenses (subuniverse percentage value of the universe) and 33.7 percent of such allowed employment expenses were for child care (subuniverse characteristic percentage value). Following the instructions, 45.3% x 33.7% = 15.3%. The standard error of a State family percentage of 15.3% is .27% (from table A-2) x 5 (from table A-3) = 1.35%; thus the standard error of 33.7% is 33.7 / 15.3 x 1.35 = 2.97%.

APPROXIMATE STANDARD ERROR OF ESTIMATED NUMBERS

To obtain the standard error of the estimated number of a population with a specific characteristic, the standard error of the percentage for the characteristic should be multiplied by the total number in the population.

For example, in a State with a population of 25,000 cases, a percentage figure of 10% represents 2,500 cases. The 10% has a standard error of 1.25%, the 2,500 has a standard error of 312.5 (25,000 x 1.25%).

SIGNIFICANT DIFFERENCES (x = .05) BETWEEN U.S. AND REGION OR STATES OR BETWEEN REGIONS AND STATES FOR CASELOAD PERCENTAGE ESTIMATES

The standard errors and intervals in the technical appendix tables are based on sample sizes of one-half of one percent (17,098 families) of the U.S. total of AFDC families in May 1975 and approximately 860 AFDC families per region or State, the minimum required for publication of the data. Since the actual sample for the U.S. and some regions and States is larger, these standard errors and intervals are generally over-estimated.

Figures in the tables refer only to percentage estimates for total caseloads. The estimated percentage in column 1 of each table is for a given characteristic in a caseload (U.S. totals in table A-4, State or region totals in table A-5). Columns 2 and 3 show the nearest upper and lower percentage values at which differences between the characteristic in this population and in another population become statistically significant (i.e., we are 95 percent confident that the true difference is greater than zero).

For example, a State's percentage for a characteristic is 28 percent. The U.S. estimate for this characteristic is 30 percent. Looking at table A-4, we see that the figures which are significantly different from 30 are 33.3 percent and 26.9 percent. Since 28 percent is between these figures, we can conclude that it is not significantly different from 30 percent.

To compare other States or regions to a specified State, we use table A-5, and the row for 28 percent. Percentages significantly different from 28 percent are less than or equal to 23.8 percent and equal to or greater than 32.4 percent. A State or regional percentage for the characteristic between 23.8 percent and 32.4 percent is not significantly different from the 28 for the specified State.

These tables were derived as follows:

The standard error of the difference between two independent estimates, P_1 of P_2, is equal to: $(P_1 (1-P_1)/n_1) + (P_2 (1-P_2)/n_2)$--(where n_1 and n_2 are the sizes of the samples from which the estimates were made). The difference between two estimates, P_1-P_2, becomes significant when the difference is greater than 2 standard errors or less than -2 standard errors (when the absolute value of the difference is greater than 2 standard errors).

In the tables, the values of P_1 are found in the estimated percentage column. The values in the adjacent columns are the nearest values to P_1 which are significantly different from it; i.e., the closest values to P_1 where P_1-P_2 is greater than 2 standard errors.

TABLE A-4.--Significant differences for percentage values between U.S. and regions or States
